LIST OF CHEMICAL COMPOUNDS

AUTHORIZED FOR USE UNDER USDA MEAT, POULTRY, RABBIT, AND EGG PRODUCTS INSPECTION PROGRAMS

INTRODUCTION

This publication lists nonfood compounds authorized by Scientific Services, Animal and Plant Health Inspection Service for use in slaughtering and processing plants operating under the U. S. Department of Agriculture Poultry, Meat, Rabbit and Egg Products Inspection Programs. The publication also lists nonfood compounds authorized by the Grading Branch, Poultry Division, Agricultural Marketing Service for use on shell eggs.

The U. S. Department of Commerce, National Marine Fisheries Service, recognizes this publication as an official list of nonfood compounds accepted for use in plants operating under the U. S. Department of Commerce Fishery Products Inspection Program.

THIS LIST IS EFFECTIVE AS OF SEPTEMBER 30, 1973

Compounds authorized by letters from the U. S. Department of Agriculture after issue of this publication are also acceptable.

A nonfood compound is defined as any agent proposed for use in a federally inspected plant but not intended as an ingredient of a meat, poultry, rabbit, or egg product.

Compounds Which Require Evaluation

Listed Compounds

Compounds classified in the categories described on pages 4 - 8 of this publication require evaluation by USDA prior to use in plants operating under the USDA poultry, meat, rabbit, and egg products inspection programs. Letters indicating acceptability of the compounds are issued to suppliers by the Compound Evaluation Laboratory. Copies of the letters must be supplied to federal inspectors as proof of authorization until the compounds appear in the subsequent revision of this publication. Once a compound appears in the publication, the letter is no longer valid as proof of authorization.

Unlisted Compounds

Paints, solvents, absorbent/antislip compounds, and some other types of nonfood compounds also require chemical acceptance by USDA, but are not categorized in this publication. Letters indicating continuing chemical acceptability are issued to suppliers by the Compound Evaluation Laboratory. Copies of such letters must be supplied to federal inspectors as proof of authorization at all times since the compounds cannot be listed in this publication. Such letters remain valid as proof of authorization until revoked by USDA. The final granting of authorization to use such compounds which do not come in direct or indirect contact with edible products or packaging materials is the responsibility of the inspector in charge at the official plant. Technical assistance will be provided by the Chemistry Staff upon request.

Procedure For Obtaining Compound Authorization

Send requests for the evaluation of compounds used in direct contact with shell eggs (categories H, I, J, K, HH, & JJ) to:

Mr. Richard T. Carey
Grading Branch
Poultry Division, AMS
U. S. Department of Agriculture
Washington, DC 20250
Telephone: (202) 447-7410

Send requests for the evaluation of all other types of nonfood compounds to:

Mr. Donald D. Derr
Compound Evaluation Laboratory
Scientific Services, APHIS
U. S. Department of Agriculture
Building 306, ARC
Beltsville, MD 20705
Telephone: (301) 344-2566

The manufacturer shall submit the following information as a basis for evaluation:

EACH COMPOUND MUST BE SUBMITTED FOR EVALUATION IN A SEPARATE LETTER

1. The complete name of each compound submitted.
2. A statement of certification from the company using words to the following effect: The compound, as it is proposed for use in the official establishments, will not deleteriously affect the poultry or poultry products, and/or meat or meat products. This certification shall also include the conditions under which this compound is believed to be satisfactory for use and the precautions necessary, if any.
3. The complete chemical formula for each compound identifying each ingredient by technical name. Identification of ingredients by brand name only is not acceptable.
 - a. The formulation must be expressed on a 100 percent basis.
 - b. Dyes must be identified by Colour Index reference.
 - c. Perfumes must be identified by proprietary name and manufacturer.

4. One label or stencil copy for each product.

a. If the product is an economic poison (i.e. pesticide, algaecide, fungicide, sanitizer, germicide, etc.), the label must be registered with the Office of Pesticides Programs, Environmental Protection Agency, Washington, D.C. 20250.

b. If the product is intended as a hog scald, tripe processing, or cooling and retort water treatment compound, the label must include a qualitative statement of ingredients.

5. One 4-ounce sample for each compound.

6. When the manufacturer and distributor are not the same, the distributor must submit the following items in addition to any information required from the manufacturer.

a. A letter from the distributor relating his compound to that of the manufacturer.

b. One label or stencil copy for the compound as distributed by him.

(i) If the product is an economic poison (i.e. pesticide, algaecide, fungicide, sanitizer, germicide, etc.), the label must be registered with the Office of Pesticides Programs, Environmental Protection Agency, Washington, D.C.

(ii) If the product is intended as a hog scald, tripe processing, or cooling and retort water treatment compound, the label must include a qualitative statement of ingredients.

c. One 4-ounce sample of the compound if it is repackaged or altered in any way by the distributor

Any change in the composition or labeling of an authorized compound voids the authorization of the compound unless the changes are submitted to the Compound Evaluation Laboratory for review prior to the change.

Compounds Which Do Not Require Evaluation

The following nonfood compounds may be used in federally inspected plants under the conditions described without being evaluated or authorized by USDA.

Denaturants

Compounds consisting only of the agents listed below may be used for denaturing meat and meat products in accordance with the conditions stated in Category DD in this publication without authorization from the Compound Evaluation Laboratory or listing in this publication. The container labels for such compounds must identify all ingredients present.

Crude Carbolic Acid
Cresylic Disinfectant

A formula consisting of:
1 part FD&C Green No. 3
40 parts oil of citronella
40 parts liquid detergent
40 parts water

Compounds consisting of the agents listed below may be used for denaturing meat and meat products in accordance with the conditions stated in Category EE in this publication without authorization from the Compound Evaluation Laboratory or listing in this publication. The container labels for such compounds must identify all ingredients present.

Charcoal (finely powdered)
FD&C Blue No. 1

FD&C Blue No. 2
FD&C Green No. 3

Compounds consisting of the agents listed below may be used for denaturing poultry and poultry products in accordance with the conditions stated in Category KK in this publication without authorization from the Compound Evaluation Laboratory or listing in this publication. The container labels for such compounds must identify all ingredients present.

Crude Carbolic Acid
Fuel Oil
Kerosene
Used Crankcase Oil

Phenolic Disinfectant conforming
to commercial standards
CS 70-41 or CS 71-41

Products consisting of the agents listed below may be used for denaturing poultry and poultry products in accordance with the conditions stated in Category LL in this publication without authorization from the Compound Evaluation Laboratory or listing in this publication. The container labels for such products must identify all ingredients present.

FD&C Blue No. 1
FD&C Blue No. 2
FD&C Green No. 3

FD&C Red No. 2
FD&C Red No. 3
Ultramarine Blue

Denaturants including ingredients other than those listed in the preceding paragraphs must be submitted by the manufacturer to the Compound Evaluation Laboratory for evaluation prior to use. After authorization by the Laboratory and acceptance by the Technical Services Staff, they will be listed into this publication in the appropriate category.

Herbicides

Herbicides may be used around the premises of federally inspected plants without authorization by USDA, provided that they are registered by the Office of Pesticides Programs, Environmental Protection Agency; and provided that they are used in accordance with label directions and in a manner which precludes the direct or indirect contamination of food products.

Category Code Letters And Their Meanings

The permissible use for each authorized compound is designated by the following code letters, and conditions for use are restricted by the category in which it is placed.

A. Compounds for use as general cleaning agents on all surfaces, or for use with steam or mechanical cleaning devices in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, surfaces must be thoroughly rinsed with potable water.

B. Compounds for use only in soak tanks or with steam or mechanical cleaning devices in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, all surfaces in the area must be thoroughly rinsed with potable water.

C. Acid cleaners for use in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, all surfaces in the area must be thoroughly rinsed with potable water.

D. Floor and wall cleaners for use in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, all surfaces in the area must be thoroughly rinsed with potable water.

E. Scouring cleaners.

Residues resulting from the use of scouring cleaners must be carefully removed from surfaces by thorough rinsing with potable water.

F. Sanitizers , disinfectants and sanitizing cleaners for all surfaces.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, surfaces must be thoroughly rinsed with potable water before operations are resumed.

G. Sanitizing solutions for all surfaces.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. A potable water rinse is not required following the use of these compounds on food contact surfaces in official meat, poultry, rabbit, or egg processing establishments provided that the surfaces are adequately drained before contact with food so that little or no residue remains which can adulterate or have a deleterious effect on edible products. Active ingredients in solutions of these compounds may not exceed the concentrations indicated on pages A2 and A3 of this publication.

H. Shell-egg cleaning compounds.

Eggs that have been washed with these compounds shall be immediately subjected to a thorough potable water rinse.

I. Shell-egg destaining compounds.

Eggs that have been washed with these compounds shall be immediately subjected to a thorough potable water rinse.

J. Shell-egg sanitizing compounds.

Eggs that have been treated with these compounds shall be subjected to a thorough potable water rinse only if they are to be immediately broken for use in the manufacture of egg products.

K. Shell-egg sanitizing compounds.

Eggs that have been treated with these compounds may be broken for use in the manufacture of egg products without a prior potable water rinse.

L. Wetting agents for use in poultry scald vats.

Compounds listed in this category are to be used in accordance with conditions set forth on page A5 of this publication.

M. Compounds for treating boilers or steam lines where the steam produced may contact edible products and/or cooling systems where the treated water may not contact edible products.

In compounds containing volatile amines, the amine in the steam may not exceed the indicated concentration.

Cyclohexylamine	10 ppm	Morpholine	10 ppm
Octadecylamine	3 ppm	Hydrazine	0 ppm
Diethylaminoethanol	15 ppm		

N. Compounds for treating boilers, steam lines, and/or cooling systems where neither the treated water nor the steam produced may contact edible products.

O. Compounds for use in sewage and/or drain lines only.

P. Compounds for use in toilets and/or dressing rooms only.

Q. Hand washing compounds.

The compounds must be dispensed from adequate dispensers located a sufficient distance from the processing line to preclude accidental product contamination. After the use of the compounds, the hands must be thoroughly rinsed with potable water.

R. Compounds for use in inedible product processing areas, non-processing areas, and/or exterior areas only.

These compounds must not be used to mask odors resulting from insanitary conditions. They must be used in a manner which precludes penetration of any characteristic odor or fragrance into edible product areas.

Permission for the use of these compounds on loading docks and other similar areas is left to the discretion of the inspectors in charge of the plants.

S. Pesticides for use in all departments.

Before using these pesticide compounds, exposed food products and packaging materials must be removed from the room or protected. After using these compounds, equipment and utensils must be thoroughly rinsed with potable water before operations are resumed.

T. Pesticides for use in inedible product areas only.

These compounds must be used in a manner that precludes their entry into edible product areas through open windows, ventilating systems, etc.

U. Pesticides for controlled use only.

Compounds listed in this category are to be used in accordance with the conditions set forth on pages A7 and A8 of this publication.

V. Compounds for washing fruits and vegetables that are to become ingredients of poultry, meat, rabbit and egg products.

After using these compounds, the products must be thoroughly rinsed with potable water.

W. Hand creams and cleaners.

The use of such compounds is limited to toilets and dressing rooms. Employees who handle edible products may use the compounds only when leaving the plant.

X. Hog scald media.

Y. Tripe denuding, bleaching, and neutralizing agents.

Treatment must be followed by thorough rinsing with potable water to remove added substances.

Z. Water conditioners.

Compounds listed in this category are to be used in accordance with the conditions set forth on pages A3 and A4 of this publication.

AA. Lubricants with incidental contact.

These compounds may be used as a lubricant, release agent, or anti-rust film on equipment and machine parts in locations in which there is exposure of the lubricated part to edible products. The amount used should be the minimum required to accomplish the desired technical effect on the equipment. If used as an anti-rust film, the compound must be removed from the equipment surface by washing or wiping as required to leave the surface effectively free of any substance which could be transferred to food being processed.

BB. Lubricants with no contact.

These lubricants may be used on equipment and machine parts in locations in which there is no possibility of the lubricant or lubricated part contacting edible products.

CC. Laundry compounds.

Laundry detergents, bleaches, and sour s may be used on fabric which contacts meat or poultry products, directly or indirectly, provided that the fabric is thoroughly rinsed with potable water at the end of the laundering operation.

DD. Denaturants.

Denaturants for carcasses, parts thereof, meat and meat food products (other than rendered animal fat) condemned for pathology and intended for disposal only as tankage. The denaturant must be deposited in all portions of the carcass or product to the extent necessary to preclude its use for food purposes.

EE. Denaturants.

Denaturants for carcasses, parts thereof, meat and meat food products intended for disposal for purposes other than human food. The denaturant must be deposited in all portions of the carcass or product to the extent necessary to preclude its use for human food.

FF. Hand washing and sanitizing compounds.

The compounds must be dispensed from adequate dispensers located a sufficient distance from the processing line to preclude accidental product contamination. The hands need not be washed prior to the use of the compounds. After the use of the compounds, the hands must be thoroughly rinsed with potable water.

GG. Hand sanitizing compounds.

The hands must be washed and thoroughly rinsed prior to sanitizing with the compound. The hands need not be rinsed following the use of the compound.

HH. Foam control compounds.

These compounds may be used to control foam in egg washing machines. Eggs washed in water containing these compounds shall be immediately subject to a thorough potable water rinse.

JJ. Shell egg sanitizing compounds.

Freshly washed eggs may be sanitized with these compounds only if the eggs are rinsed prior to application of the compound. A subsequent rinse is not required.

KK. Denaturants.

Denaturants for poultry carcasses, parts thereof, or poultry products condemned for pathology and intended for disposal only as tankage. The denaturant must be deposited in all portions of the carcass or product to the extent necessary to preclude its use for food purposes.

LL. Denaturants.

Denaturants for poultry carcasses, parts thereof, or poultry products intended for disposal for purposes other than human food. The denaturant must be deposited in all portions of the carcass or products to the extent necessary to preclude its use for human food.

NOTE:

In several categories, reference is made to the need for rinsing with potable water. USDA accepts water used in federally inspected plants as being potable when such certification is made by state health agency authorities.

APPENDIX

The following information is provided as a guide to those manufacturing, supplying, and using compounds. The fact that a compound is formulated wholly or partly from materials listed in the Appendix does not constitute authorization for the use of the compound in official meat and poultry establishments.

Users of this Appendix are cautioned that some materials listed herein may be the subject of outstanding U. S. patents.

Materials for General Cleaning

Preparations containing one or more of the common inorganic alkaline cleaning materials and certain wetting agents are acceptable only if they are used in a manner that will not contaminate food products. All processing equipment to which these are applied must be rinsed free of residues before processing operations are resumed. Heavily perfumed preparations, strong smelling disinfectants, or deodorizers are not permitted in cleaning and sanitizing operations.

Some materials accepted for general cleaning are: Sodium carbonate (soda ash, sal soda), sodium hydroxide (caustic soda), sodium metasilicate, sodium bicarbonate, trisodium phosphate, sodium hexametaphosphate, tetrasodium pyrophosphate, sodium tripolyphosphate, soap, lime, certain wetting agents and borates (if with strong alkali). The wetting agents accepted are those ionic and nonionic compounds for which adequate data are available to Scientific Services to assure they will present no hazard under the conditions of use.

Compounds containing in excess of 20 percent caustic soda, or the equivalent causticity thereof, are accepted for use with steam and mechanical cleaning devices only.

Acid Cleaners

Use of the following acids will be permitted for removal of rust and corrosion on food processing equipment, provided they are used so there is no contact with food products.

Citric acid, lactic acid or other harmless organic acids
Glycolic acid (hydroxyacetic acid)
Hydrochloric acid (muriatic acid)
Phosphoric acid
Sodium bisulfate
Sulfamic acid

All surfaces to which they are applied should be immediately rinsed to remove residues and reduce staining or corrosion of equipment.

Sanitizing Materials

Sanitizers may be used only after thorough and effective cleaning and while product is out of the area or adequately protected from contamination. Combination cleaner-sanitizers may be used without prior cleaning.

I. Equipment and utensils (hard, non-porous surfaces).

The information contained in paragraphs A - D is an essential restatement of that provided in the Food Additives Regulations. The primary reference is CFR Title 21 Part 121 Section 121.2547.

Authorized sanitizing solutions may be used on hard, non-porous food contact surfaces such as equipment and utensils in official establishments, without a following potable water rinse, under the following conditions:

A. Such surfaces are thoroughly drained and any collection of liquid removed therefrom before contact with product is made.

B. The sanitizing solutions are used in accordance with instructions on the label.

C. The sanitizing solutions consist of one of the following, to which may be added components generally recognized as safe and components which are permitted by prior sanction or approval.

1. An aqueous solution containing potassium, sodium, or calcium hypochlorite with or without the bromides of potassium, sodium, or calcium.
2. An aqueous solution containing dichloroisocyanuric acid, trichloroisocyanuric acid, or the sodium or potassium salts of these acids, with or without the bromides of potassium, sodium, or calcium.
3. An aqueous solution containing potassium iodide, sodium p-toluene sulfonchloramide, and sodium lauryl sulfate.
4. An aqueous solution containing iodine, butoxy monoether of mixed (ethylene-propylene) polyalkylene glycol having a cloud-point of 90°C. -100°C. in 0.5 percent aqueous solution and an average molecular weight of 3300, ethylene glycol monobutyl ether and diethylene glycol monoethyl ether.
5. An aqueous solution containing elemental iodine, hydriodic acid, isopropyl alcohol, polyoxyethylene (4-12 moles) nonylphenol with a maximum average molecular weight of 748, and/or polyoxyethylene-polyoxypropylene block polymers (having a minimum average molecular weight of 1900).
6. An aqueous solution containing elemental iodine, sodium iodide, sodium dioctylsulfosuccinate, and polyoxyethylene-polyoxypropylene block polymers (having a minimum average molecular weight of 1900).
7. An aqueous solution containing dodecylbenzenesulfonic acid, polyoxyethylene polyoxypropylene block polymers (having a minimum average molecular weight of 2800).
8. An aqueous solution containing elemental iodine, butoxy monoether of mixed (ethylene-propylene) polyalkylene glycol (having a minimum average molecular weight of 2400), and alpha-lauroyl-omega-hydroxypoly (oxyethylene) with an average 8-9 moles of ethylene oxide and an average molecular weight of 400.
9. An aqueous solution containing n-alkyl (C₁₂-C₁₈) benzyl dimethylammonium chloride compounds having average molecular weights of 351-380 and consisting principally of alkyl groups with 12-16 carbon atoms with or without not over 1 percent each of groups with 8 and 10 carbon atoms.
10. An aqueous solution containing trichloromelamine and either sodium lauryl sulfate or dodecylbenzenesulfonic acid.
11. An aqueous solution containing equal amounts of n-alkyl (C₁₂-C₁₈) benzyl dimethylammonium chloride and n-alkyl (C₁₂-C₁₄) dimethyl ethylbenzyl ammonium chloride (having an average molecular weight of 384).
12. An aqueous solution containing the sodium salt of sulfonated oleic acid, polyoxyethylene-polyoxypropylene block polymers (having an average molecular weight of 2,000 and 27 to 31 moles of polyoxypropylene). All equipment and utensils treated with this sanitizing solution shall have a drainage period of 15 minutes prior to use in contact with food.
13. An Aqueous solution containing elemental iodine and alkyl (C₁₂-C₁₅) monoether of mixed (ethylene-propylene) polyalkylene glycol, having a cloud point of 70°C. -77°C. in 1 percent aqueous solution and an average molecular weight of 807.
14. An aqueous solution containing iodine, butoxy monoether of mixed (ethylene-propylene) polyalkylene glycol, having a cloud point of 90°C. -100°C. in 0.5 percent aqueous solution and an average molecular weight of 3,300, and polyoxyethylene-polyoxypropylene block polymers (having a minimum molecular weight of 2,000).

D. The solutions identified in the above paragraphs must not exceed the following concentrations:

1. Solutions identified in paragraph (1) will provide not more than 200 parts per million of available halogen determined as available chlorine.
2. Solutions identified in paragraph (2) will provide not more than 100 parts per million of available halogen determined as available chlorine.
3. Solutions identified in paragraphs (3), (4), (5), (6), (8), (13), and (14) of this section will contain iodine to provide not more than 25 parts per million of titratable iodine. The adjuvants used with the iodine will not be in excess of the minimum amounts required to accomplish the intended technical effect.
4. Solutions identified in paragraph (7) of this section will provide not more than 400 parts per million of dodecylbenzenesulfonic acid and not more than 80 parts per million of the block polymers identified in the paragraph.

5. Solutions identified in paragraphs (9) and (11) will not provide more than 200 parts per million of the active quaternary compound when ready to use.

6. Solutions identified in paragraph (10) will not provide more than sufficient trichloromelamine to produce 200 parts per million of available chlorine and either sodium lauryl sulfate at a level not in excess of the minimum required to produce its intended functional effect or not more than 400 parts per million of dedecylbenzenesulfonic acid.

7. Solutions identified in paragraph (12) will not provide more than 200 parts per million of sulfonated oleic acid, sodium salt.

E. The use of authorized sanitizing solutions (other than those identified in paragraphs (C) and (D) above) or combination cleaner-sanitizers on hard, non-porous food contact surfaces such as equipment and utensils, must be followed by a potable water rinse.

II. Equipment and utensils (porous and semi-porous surfaces).

Concentrations of authorized sanitizing solutions, considerably higher than those identified in paragraph (D) above, are necessary to provide efficacy in treating porous and semi-porous surfaces. Any authorized sanitizing solution or combination cleaner-sanitizer may be used on such food contact surfaces at the manufacturers' recommended concentration. Use of these higher concentrations for insuring efficacy must be followed by a potable water rinse.

III. Ceilings, Floors, and Walls.

Authorized sanitizing solutions may be used for mold control on ceilings, floors and walls without a following potable water rinse, unless in the judgement of the designated official responsible for inspection activities at the establishment, the presence of such residues is objectionable.

IV. Employees' Hands.

Authorized sanitizing solutions identified in paragraph (C) above may be used on the hands of employees handling meat food product without a subsequent rinse. Hand sanitizing solutions are not a substitute for washing. Accordingly, these sanitizing solutions must be used only after thorough hand washing with soaps or detergents and water. The effectiveness of any approved sanitizing solution shall be equal to or greater than that of 50 parts per million of chlorine. The establishment will make periodic tests to assure that an effective concentration of sanitizing agent is maintained. The establishment will provide the necessary test kits and directions for their use. The inspector will occasionally make verification checks.

Combination detergent-germicides, (single step compounds designed to combine hand washing with sanitizing), will be considered for approval on the basis of their equivalency to 50 parts per million of chlorine solutions as determined by the "Available Chlorine Germicidal Equivalent Concentration" method mentioned below. The use of such compounds will require a final potable water rinse, but will not require a preliminary washing with soaps or detergents.

The method for determining equivalent effectiveness, "Available Chlorine Germicidal Equivalent Concentration", is outlined in Section 5.012 of the 10th Edition of the "Official Methods of Analysis of the Association of Official Analytical Chemists". Modifications necessary to make the method valid for determining the effectiveness of quaternary ammonium compounds are available from the Compound Evaluation Laboratory.

V. Safety

Preparations of quaternary ammonium compounds and those of high available chlorine content, such as sodium or calcium hypochlorite, chloramine T, dichloramine T, and chlorinated cyanuric acid should not be mixed, since such handling may cause fires.

Substances for Potable Water Treatment

Compounds recognized as safe for the treatment of potable water are accepted for the treatment of entire plant systems where the water may contact edible products with the following exceptions:

The concentration of phosphates may not exceed 20 parts per million calculated as phosphate ion.

Chlorine may be used in process water of meat establishments up to 5 parts per million calculated as available chlorine. Under reliable controls, the chlorine level may be increased up to 200 parts per million in water used on meat carcasses. When so used, the carcass must be air exposed to remove free chlorine and moisture before further processing.

Chlorine may be used in the process water of poultry establishments at levels acceptable to management, recognizing the self-limiting factors of effect on product, corrosion of equipment, and acceptability by plant personnel. Plant management must notify the inspector in charge when the chlorine level is increased above 20 parts per million. Chlorine must be dispensed at a constant and uniform level and the method or system must be such that a controlled rate is maintained.

Compounds used for this purpose in official poultry establishments may not alter the water retentive properties of poultry products being processed.

Substances for Cooling and Retort Water Treatment

The following information is an essential restatement of that provided in the Meat Inspection Regulations. The primary reference is CFR Title 9 Part 318 Section 318.7.

Preparations containing a small amount of one or more of the substances listed below or others subsequently appearing in the appropriate regulation are accepted for use in the retort water, washing spray, or in cooling water for canned products.

Calcium chloride	Sodium bicarbonate
Citric acid	Sodium bisulfate
Disodium-calcium ethylene- diaminetetraacetate	Sodium carbonate
Disodium ethylenediamine- tetraacetate	Sodium dodecylbenzene sulfonate
Disodium phosphate	Sodium gluconate
Diethyl sodium sulfosuccinate	Sodium hexametaphosphate
Ethylenediaminetetraacetic acid	Sodium lauryl sulfate
Isopropanol	Sodium metasilicate
Potassium pyrophosphate	Sodium nitrite
Propylene glycol	Sodium pyrophosphate
Sodium n-alkylbenzene sulfonate (alkyl group predominantly C ₁₂ and C ₁₃ and not less than 95 percent C ₁₀ to C ₁₆ .)	Sodium tripolyphosphate
	Zinc oxide
	Zinc sulfate

The use of sodium nitrite in meat establishments is limited to 600 parts per million of the treated water. The dry nitrite must be decharacterized with 0.05 percent powdered charcoal or 0.03 percent nigrosine. Bulk decharacterized sodium nitrite when in cook room shall be held in a locked metal bin or container conspicuously labeled "Decharacterized Sodium Nitrite--to be used by authorized personnel only". The diethyl sodium sulfosuccinate, sodium dodecylbenzenesulfonate, sodium lauryl sulfate, sodium n-alkylbenzenesulfonate, and sodium pyrophosphate are restricted to a maximum of .05 percent, the zinc oxide and zinc sulfate to .01 percent, and the isopropanol to 0.002 percent of the treated water.

Potentially harmful solvents, strong caustic materials, or wetting agents, which are known to be harmful or for which toxicity data are not adequate for proper evaluation, are not allowed. These restrictions are imposed to preclude contamination of product with harmful substances should leakage of container permit the water to contact product.

Substances for Cooling Water or Steam Line Treatment

There is no specific list of materials which may be used in cooling systems or steam lines where the water or steam will not contact edible products. Most materials generally used in industry would be acceptable. However, there are restrictions. Compounds containing sodium borate, sodium nitrite, sodium nitrate, or any combination thereof may be used provided that the compound is decharacterized by the addition of a blue or green dye at 2.5 percent of the sodium borate or sodium nitrite present. If both sodium borate and sodium nitrite are present, the decharacterization must be based on the concentration of sodium nitrite. If both sodium nitrite and

sodium nitrate are present, the decharacterization must be based on the concentration of sodium nitrite present including that resulting from the reduction of sodium nitrate. Chromate salts may be used as corrosion inhibitors, but only in cooling towers, evaporative condensers, or other systems in which the treated water does not enter processing areas of the plant.

While there are no materials which are categorically unacceptable for use, there may be compounds which are unacceptable because of unfavorable toxicology or other considerations. Each compound submitted will be evaluated on its own merit.

Wetting Agents for Poultry Scald Vats

Alkaline materials generally recognized as safe, and those listed below may be used in poultry scald vats to a maximum concentration of 1 percent unless otherwise limited. Compounds used for this purpose may not alter the water retentive properties of the processed poultry.

<u>Substances</u>	<u>Limitations</u>
Alkyl polyethoxy polypropoxy ethanol	No surfactant residue may remain on the scalded poultry
Dimethylpolysiloxane	10 ppm in the scald water
Diocetyl sodium sulfosuccinate	
Ethylenediaminetetraacetic acid, sodium salts	
alpha-Hydro-omega-hydroxy-poly(oxyethylene)/poly(oxypropylene) (minimum 15 moles) / poly(oxyethylene) block copolymer, (Poloxamer)	0.05 percent in the scald water
Polyoxyethylene (20) sorbitan monooleate	0.0175 percent in the scald water
Propylene glycol	
Sodium dodecylbenzene sulfonate	
Sodium 2-ethylhexylsulfate	
Sodium lauryl sulfate	
Sodium sulfate	

Boiler Water Treatment Materials

The following information is an essential restatement of that provided in the Food Additives Regulations. The primary reference is CFR Title 21 Part 121 Section 121.1088.

One or more of the following substances in amounts sufficient to serve its functional purpose are permitted for treatment of water in boilers for producing steam that may contact product.

<u>Substances</u>	<u>Limitations</u>
Acrylamide-sodium acrylate resin	
Ammonium alginate	
Cobalt sulfate (as catalyst)	
Lignosulfonic acid	
Monobutyl ether of polyoxyethylene glycol	Minimum mol. wt. 1,500
Monobutyl ether of polyoxypropylene glycol	Ditto
Polyoxyethylene glycol	Minimum mol. wt. 1,000
Polyoxypropylene glycol	Ditto
Potassium carbonate	
Sodium acetate	
Sodium alginate	
Sodium aluminate	
Sodium carbonate	
Sodium glucoheptonate	
Sodium hexametaphosphate	
Sodium humate	
Sodium hydroxide	
Sodium lignosulfonate	
Sodium metasilicate	
*Sodium nitrate	
Sodium phosphate (mono-di-tri)	

Sodium polyacrylate
Sodium polymethacrylate
Sodium silicate
Sodium sulfate
*Sodium sulfite
Sodium tripolyphosphate
Tannin (including Cueuracho extract)
Tetrasodium EDTA
Tetrasodium pyrophosphate
Trisodium nitrilotriacetate

Not to exceed 5 ppm in boiler
feed water

*To promote handling of preparations containing nitrate or sulfite in a manner as to preclude their use in meat products, such preparations must be adequately decharacterized. The preparation is considered to be acceptable if the nitrate or sulfite present is decharacterized by 33 percent of its weight of sodium hydroxide; by 100 percent of its weight of sodium carbonate; by 50 percent of its weight of trisodium phosphate or if the preparation contains not less than 5 percent tannin, lignin, sodium lignosulfonate, or sodium humate.

The Division also permits the use of the amines (hydrazine, octadecylamine, morpholine, cyclohexylamine, or diethylaminoethanol) for the treatment of boiler water. It permits hydrazine at a level that will produce no residue in the steam condensate and octadecylamine up to a level that will result in more than 3.0 parts per million in steam condensate. The neutralizing amines, morpholine and cyclohexylamine are acceptable for use at such concentration that will result in not more than 10 parts per million in the steam condensate. Diethylaminoethanol is acceptable up to a level that will result in no more than 15 parts per million in the steam condensate. These amines are permitted in systems where steam is used for cooking product and rendering and deodorizing fats, since it has been determined that the quantity of amines present in steam as result of use of these in a system would not adversely affect product.

Drain Cleaners

In addition to strongly acidic or basic compounds, those containing enzymes, bacteria, or a combination thereof may be used in official establishments if the manufacturer meets the following:

1. Manufacturers of compounds containing bacterial cultures will be required to provide a taxonomic identification (i.e., identification by genus and species) of the cultures used to the Beltsville laboratory. No pathogenic bacteria will be permitted.
2. The manufacturer must provide the laboratory with a record of salmonellae analysis for each lot of the finished enzymic cleaner proposed for sale to official establishments. Testing must be conducted by a qualified microbiologist.

Hand Washing Compounds

Only liquid soaps or liquid detergents in suitable dispensing devices are allowed in the slaughtering or food processing areas of the establishment. Powdered soaps in suitable dispensing devices may be used in toilets and dressing rooms. Abrasive hand cleaners may contain up to 90 percent sodium borate (borax) in combination with soaps or detergents and other adjuvants common to such products. Their use is also limited to toilets and dressing rooms.

Insecticides, Rodenticides, and Fumigants

Elimination of vermin in and around establishments is vital to the maintenance of good sanitation. In combating these pests, two things are of utmost importance:

- (a) prevent their breeding
- (b) prevent their entrance into establishments

This may be accomplished only through a program designed for the elimination of all areas outside the establishment where these pests may breed or may be sheltered. The construction of the plant itself must be such as will insofar as possible prevent these pests from gaining entrance. When vermin do gain entrance to official establishments in spite of vigorous attempts to keep them out, certain eradication methods are permitted.

The following information gives a brief statement of methods used and identifies the specific materials permitted.

Insecticides

The so-called knock down sprays containing pyrethrum extracts and other materials not having residual killing action may be used in places where edible products are handled providing exposed edible products are removed or covered before spraying is begun and the premises are cleaned by thorough washing after spraying is completed. The following insecticides may be used in such areas:

Allethrins
Organic thiocyanates or lethanes
Pyrethrins
Pyrethrum extract
Rotenone
SBP-1382, Synthrin, or NIA 17370

Concentrations of 1 percent or less, singly or in combination, of the following synergists may be used in conjunction with the insecticides listed above:

Piperonyl butoxide
Piperonal bis[2-(butoxyethoxy) ethyl]acetal
N-Octyl bicycloheptane dicarboximide
N-Propyl isome
Sulfoxide

The concentration of synergists may be increased to a maximum of 5 percent if the product is dispensed as an aerosol spray from an adequate fogging device. An aerosol spray is defined by the Office of Pesticides Programs as one in which none of the droplets exceeds 50 microns in diameter and 80 percent of the droplets are less than 30 microns in diameter.

In contrast to the non-residual materials, there are residual insecticides which kill insects over a long period of time. These insects may fall into product since there is no practical way to protect product during operations. Therefore, use of residual insecticides is restricted to areas where exposed products are not handled. The following compounds may be used in such areas in addition to those enumerated above.

Baygon	Entex
Carbaryl	Kepone
Chlordane	Lindane
Dichlorvos (DDVP)	Malathion
Diazinon	Methoxychlor
Dime thoate	Ronnel
Dipterex	
Dowco 179	

Sugar baits containing up to 2 percent of either 0,0-diethyl-0-(isopropyl-6-methyl-4-pyrimidyl) thiophosphate (Diazinon) or 0,0-dimethyl trichlorohydroxyethyl phosphonate (Dipterex, Bayer L 1359) or malathion or other residual materials listed above, may be used for fly control around livestock pens and inedible departments.

The following substances when mixed with inert materials may be used as insect powders for the elimination of roaches under circumstances which absolutely preclude contact with product: Sodium fluoride, borax, boric acid, derris and cube roots, or any of the residual or non-residual materials listed above.

All powdered or granular insecticides, except those marketed exclusively in labeled dispenser containers, must be colored a definite blue or green.

Use of Automatic Insecticide Dispensers

Automatic insecticide dispensing systems may be used in processing or storage areas of official meat or poultry processing establishments provided that the dispenser is operated only when products are not being processed or stored in open containers in the area. Insecticides used in the systems must be authorized for use as indicated in category (S) of the "List of Chemical Compounds". Conditions of use must also comply with those listed for that category.

The systems may be used in areas where exposed foods are not handled without limitation on the time of operation provided that sufficient precautions are taken to preclude entry of insecticide mist or affected insects into processing or storage areas through open windows, ventilating systems, etc. Insecticides dispensed in these areas must be authorized for use as indicated in category (S) or category (T) of the above mentioned publication.

Rodenticides

In general, rodent baits are not allowed to be placed in edible product departments until after operations have been ended for the day. Strict account must be kept of the location and number of baits set out. All uneaten baits must be gathered up and destroyed before operations are begun the next day. Baits are not allowed to be placed in dry, salt cellars. They may be placed in other departments containing enclosed meats, but care must be taken that they are so placed as to prevent contamination of the meat. All baits must be kept in a separate place designated by the Inspector in charge at the plant.

1. Baits composed of Warfarin, red squill, or ANTU (alpha-naphthylthiourea) and inert ingredients may be left in rooms containing exposed meat provided that the layout and conditions are approved by the Inspector in charge at the plant.

2. Baits consisting of barium carbonate, 2-pivalyl-1,3 indandione (Pival, Pivalyn, etc.), 2-isovaleryl-1,3- indandione (PMP, Valone), chlorophacinone, diphacinone (Diphacin), Prolin, and norbormide, and inert ingredients may be used only under circumstances which absolutely assure no contact with food products.

3. Baits in which the inert materials consist mainly of cereal or other vegetable meals or flours must be colored blue or green. Where inert materials consist mainly of whole or cracked grain, no addition of color is necessary.

Fumigants

Fumigation with hydrocyanic acid gas, methyl bromide gas, or phosphine gas generated from aluminum phosphide is sometimes desirable for the eradication of vermin. Since each gas used is extremely poisonous to man as well as to vermin, permission for their use must first be obtained from the inspector in charge and a competent, experienced person must be placed in direct charge of the operations. Exposed meat and packaged meats need not be removed from the room being fumigated in official meat establishments. Edible products and packaging materials must be removed from the room being fumigated in official poultry establishments, and the room must be washed prior to their return. After fumigation the room should be well ventilated before inspectors or workmen enter the room. Ventilation must also be sufficient to assure complete removal of the gas from the surfaces contacted. The equipment used should be so constructed and controlled as to positively prevent any of the liquid or powder from contaminating product. Only the gas should be permitted to escape from the fumigating equipment.

Materials Used in Washing Fruits and Vegetables

The following information is an essential restatement of that provided in the Food Additives Regulations. The primary reference is CFR Title 21 Part 121 Section 121.1091.

Substances generally recognized as safe and those listed below may be used for that purpose at the minimum necessary amount unless otherwise limited.

Substances

Aliphatic acid mixture consisting of caproic, enanthic, caprylic, and pelargonic acids.

Limitations

Not to exceed 1 percent in lye peeling solution to assist in the lye peeling of fruits and vegetables.

Polyacrylamide

Not to exceed 10 ppm in wash water.
Contains not more than 0.2 percent
acrylamide monomer.

Potassium bromide

Sodium hypochlorite

Sodium n-alkylbenzenesulfonate

(alkyl group predominantly C₁₂ and C₁₃
and not less than 95 percent C₁₀ to C₁₆).

Not to exceed 0.2 percent in wash
water. May be used in washing
or to assist in lye peeling of fruits
and vegetables.

Ditto

Sodium dodecylbenzenesulfonate (alkyl group
predominantly C₁₂ and not less than 95
percent C₁₀ to C₁₆).

Sodium 2-ethylhexyl sulfate

Ditto

Sodium mono- and dimethyl naphthalene
sulfonates (mol. wt. 245-260).

Hog Scald Agents

The following information is an essential restatement of that provided in the Meat Inspection Regulations. The primary reference is CFR Title 9 Part 318 Section 318.7.

The following materials and others subsequently appearing in the appropriate regulation are allowed for the dehairing of hog carcasses at a level sufficient for the purpose providing that they are removed by subsequent rinsing operations.

Caustic soda

Dimethyl polysiloxane

Diethyl sodium sulfosuccinate

Disodium calcium ethylene
diaminetetraacetate

Disodium ethylenediamine-
tetraacetate

Disodium phosphate

Ethylenediaminetetraacetic acid

Lime (calcium oxide, calcium
hydroxide)

Propylene glycol

Sodium pyrophosphate

Sodium sulfate

Sodium tripolyphosphate

Soap (prepared by reaction of calcium,
potassium, or sodium hydroxide
with rosin or fatty acids of natural
fats or oils).

Sodium acid pyrophosphate

Sodium carbonate

Sodium dodecylbenzene sulfonate

Sodium hexametaphosphate

Sodium n-alkylbenzenesulfonate

(alkyl group predominantly C₁₂
and C₁₃ and not less than 95
percent C₁₀ to C₁₆).

Sodium lauryl sulfate

Sodium metasilicate

Sucrose

Trisodium phosphate

Tripe Denuding, Bleaching, and Neutralizing Agents

The following information is an essential restatement of that provided in the Meat Inspection Regulations. The primary reference is CFR Title 9 Part 318 Section 318.7.

The following materials and others subsequently appearing in the appropriate regulation are allowed to denude mucous membrane from tripe at a level sufficient for the purpose providing that they are removed from the tripe by a potable water rinse.

Citric acid

Hydrogen peroxide

Lime (calcium oxide, calcium hydroxide)

Sodium carbonate

Sodium gluconate

Sodium hydroxide

Sodium metasilicate

Sodium persulfate

Trisodium phosphate

Lubricants

The following information is an essential restatement of that provided in the Food Additives Regulations. The primary reference is CFR Title 21 Part 121 Section 121.2553.

The following materials are allowed as lubricants, anti-rust agents, or release agents where there is a possibility of incidental food contact. The amount used should be the minimum required to accomplish the required technical effect on the equipment so treated.

Substances	Limitations
Aluminum stearoyl benzoyl hydroxide	For use as a thickening agent in mineral oil lubricants at a level not to exceed 10 percent by weight of the mineral oil.
BHA	
BHT	
Castor Oil	
Castor Oil, dehydrated	
Castor Oil, partially dehydrated	
Dialkyldimethylammonium aluminum silicate where the alkyl groups are derived from hydrogenated tallow fatty acids (C ₁₄ -C ₁₈) and where the aluminum silicate is derived from bentonite.	For use only as a gelling agent in mineral oil lubricants at a level not to exceed 7 percent by weight of the mineral oil.
Dimethylpolysiloxane (viscosity greater than 300 centistokes).	
Fatty acids derived from animal or vegetable sources, and the hydrogenated forms of such fatty acids.	
12-Hydroxystearic acid	
Isopropyl oleate	For use only as an adjuvant to improve lubricity in mineral oil lubricants.
Mineral Oil	
Petrolatum	
Phenyl-a-and/or phenyl-b-naphtylamine	For use only, singly or in combination, as antioxidants in mineral oil lubricants at a level not to exceed a total of 1 percent of weight of the mineral oil.
Polybutene (minimum average molecular weight 80,000).	
Polybutene, hydrogenated	For use only as a thickener in mineral oil lubricants.
Polyethylene	
Polyisobutylene (average molecular weight 35,000-140,000)	
Polysorbate 60	As a thickening and stabilizing agent, at a level not to exceed 2 percent by weight of lubricants.
Sodium nitrite	For use only as a rust preventive in mineral oil lubricants at a level not to exceed 3 percent by weight of the mineral oil.
Sorbitan monooleate	For use as a rust preventive in mineral oil lubricants.

Materials not permitted

Compounds containing antimony, arsenic, cadmium, lead, mercury, selenium or other materials classified as hazardous substances may not be used for any purpose. Certain potentially harmful materials, like chromic acid, hydrofluoric acid, oxalic acid, and the salts of those acids, are not permitted in compounds used for cleaning or sanitizing purposes.

Compounds containing heavy perfumes, isomers of dichlorobenzene, pine oil, etc., are not allowed in areas where edible products are handled because their strong characteristic odor may interfere with inspection.

Labeling Requirements

Generally, the law does not require a statement of ingredients on detergent formulations. Preparations for which no claims are made for germicidal or fungicidal properties must be labeled to show the name of the preparation and the name of the firm marketing the preparation and should also describe the nature and purpose of use as well as instructions for use.

The law requires a preparation for which claims are made for germicidal or fungicidal properties to bear a label showing the active ingredients and to be appropriately registered with the Office of Pesticides Programs, Environmental Protection Agency. Accordingly, any such preparation offered for use in official establishments must be labeled in accordance with these requirements.

Because of the possibility of residues remaining in product as result of use of chemicals in washing canned items, in denuding tripe, or in hog scald water, the container labels for such preparations must identify the chemicals present. For those chemicals having restrictions as to maximum amount permitted, the percentage present must also be shown.

To assure safe use of boiler water additives the law requires that labels for such products include the common or chemical name of each ingredient and directions for use adequate to insure compliance with the law.

If a preparation has been authorized by this Department and reference is made to such authorization on the container label or other printed material, the statement must be specific indicating that the preparation is "Authorized by USDA for use in federally inspected meat and poultry plants". Such statements should not be given undue prominence on the label.

Any attempt by a proponent to mislead inspectors as to the identity of constituents present in a preparation or to its accepted method of use, will result in its rejection.
